Recruitment Roadmap

AI Engineer Recruitment Process

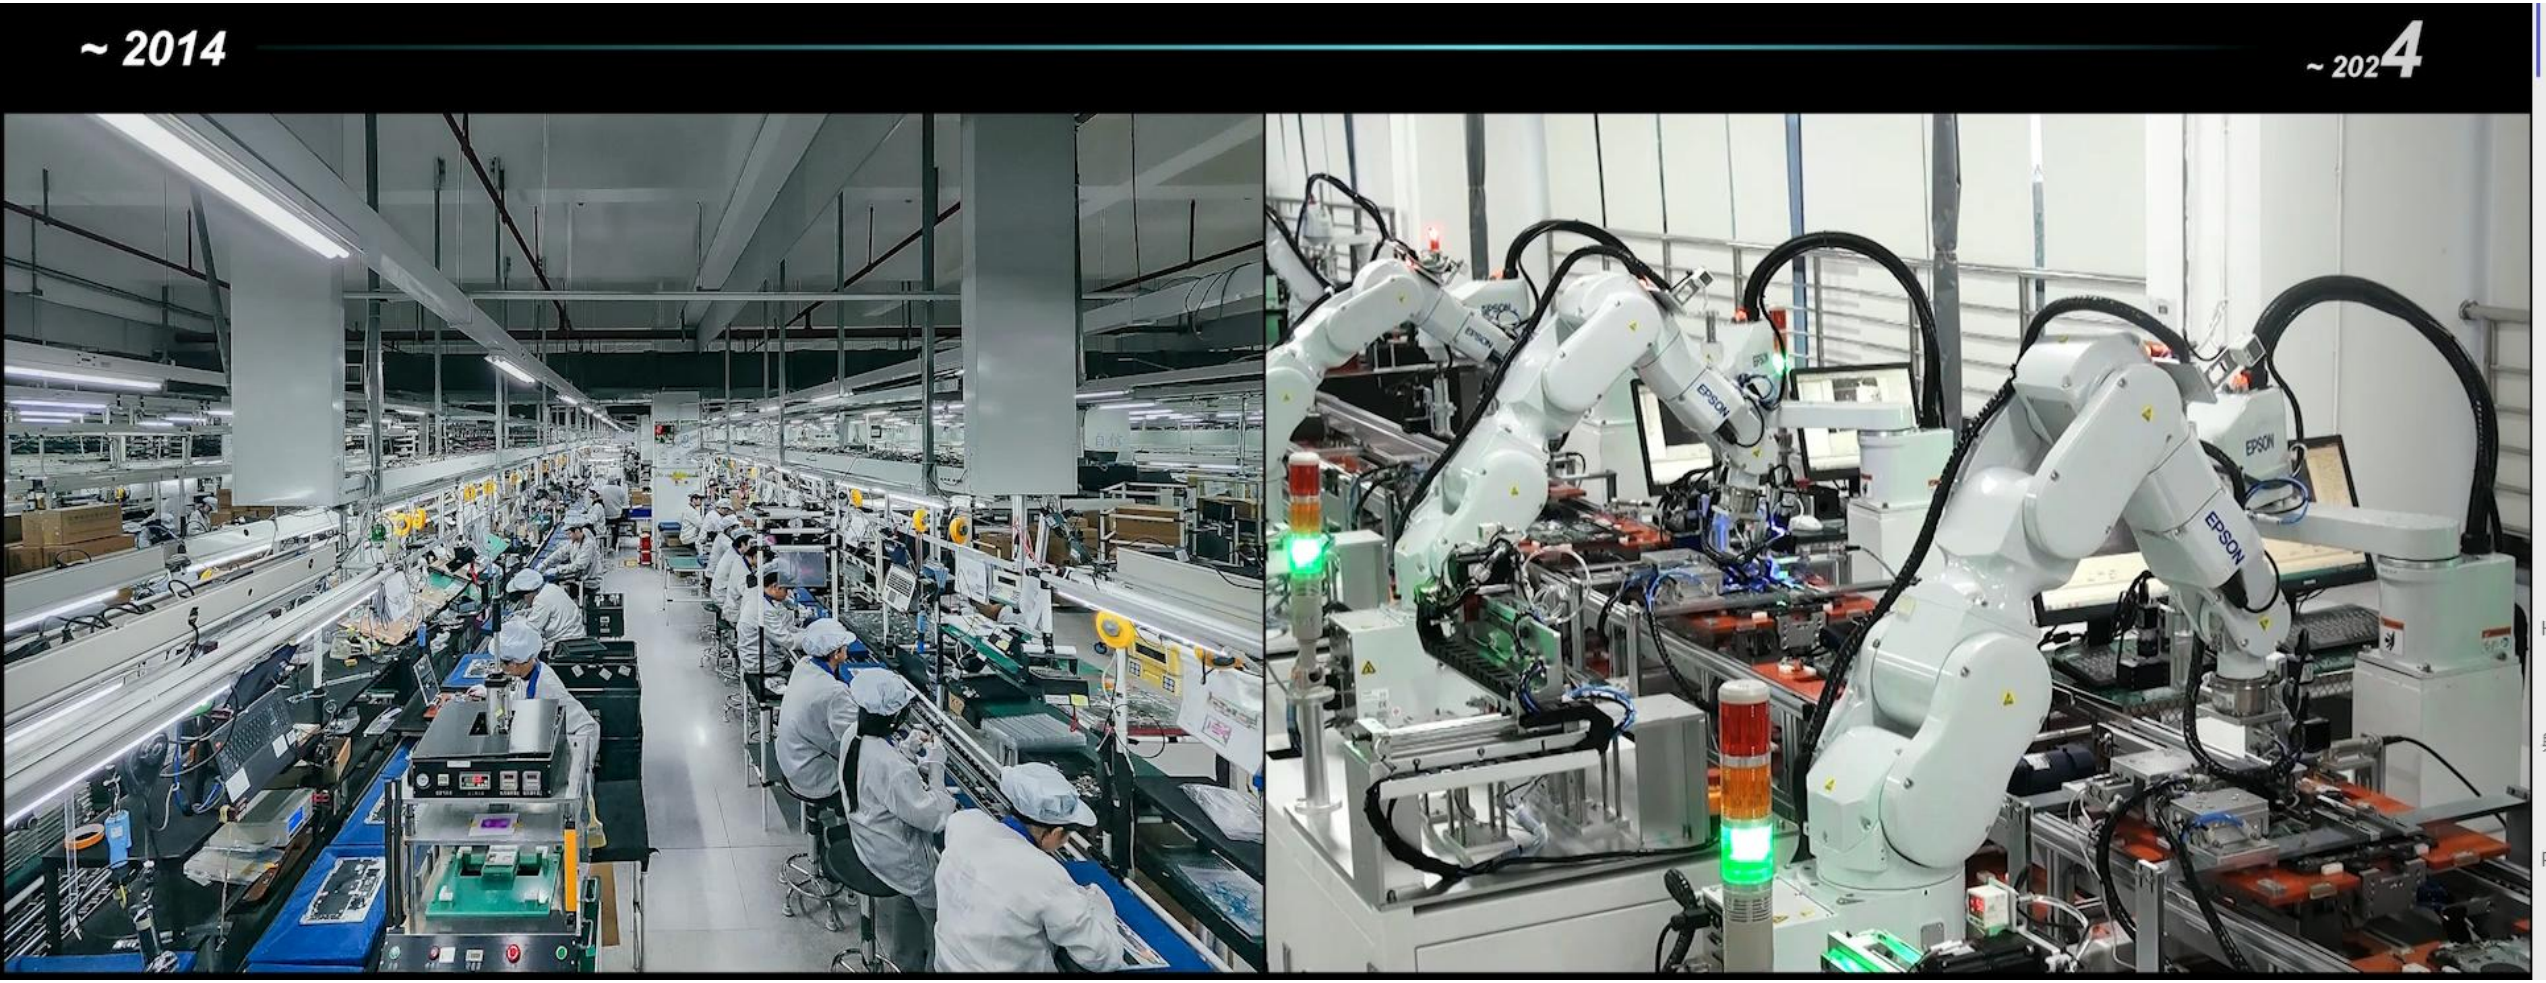

PEGAAI

Speed up the Evolution

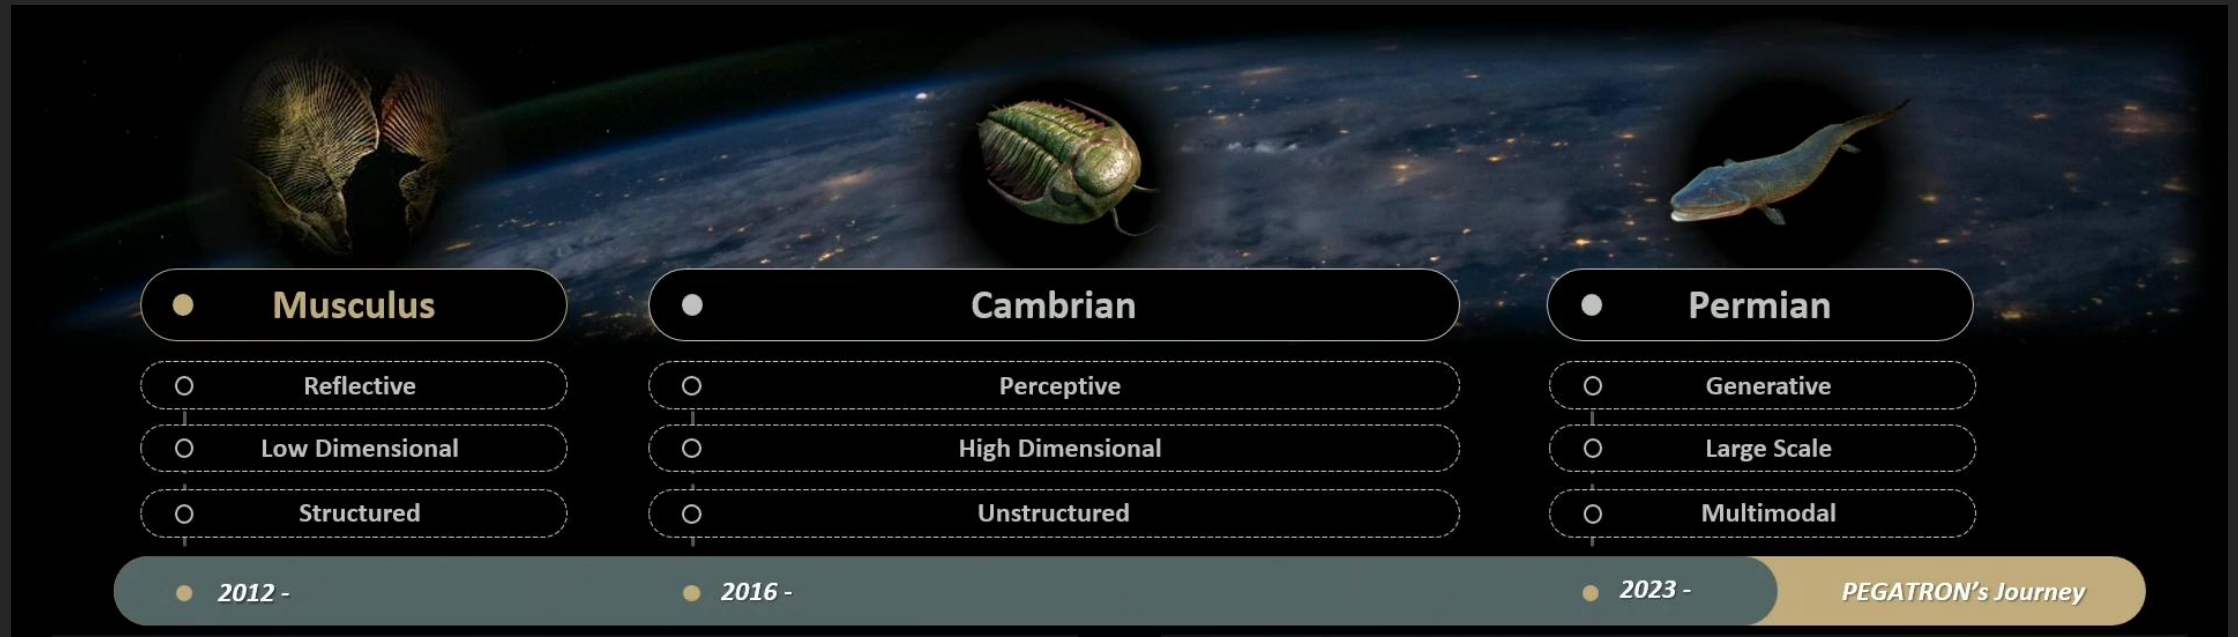

Introduction

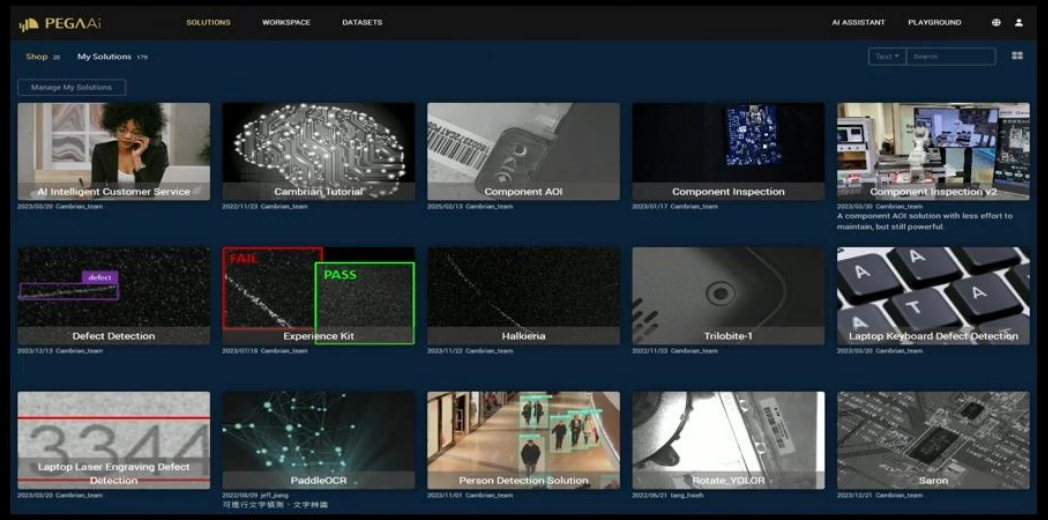

Pegatron - Digitalization is the path toward Autonomy

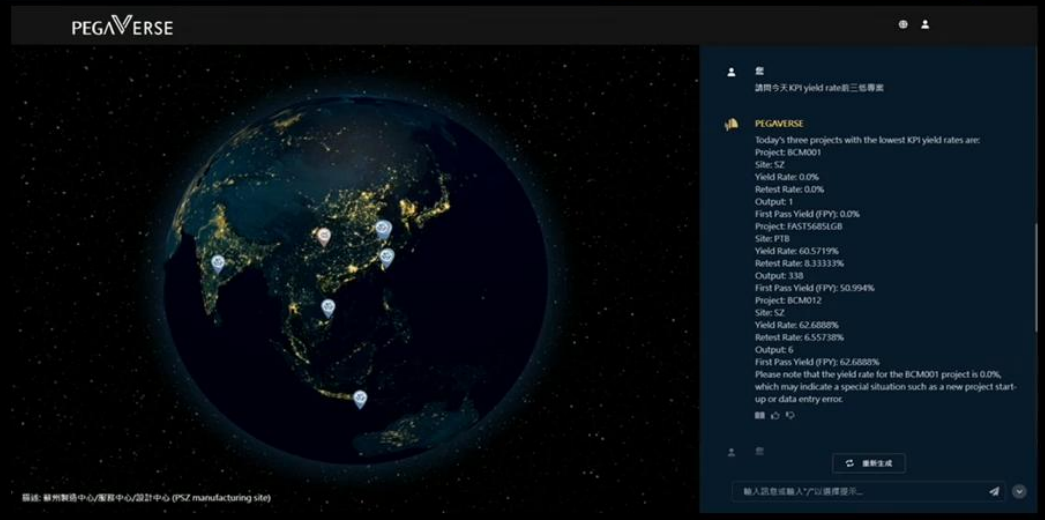

We start AI from 2012.

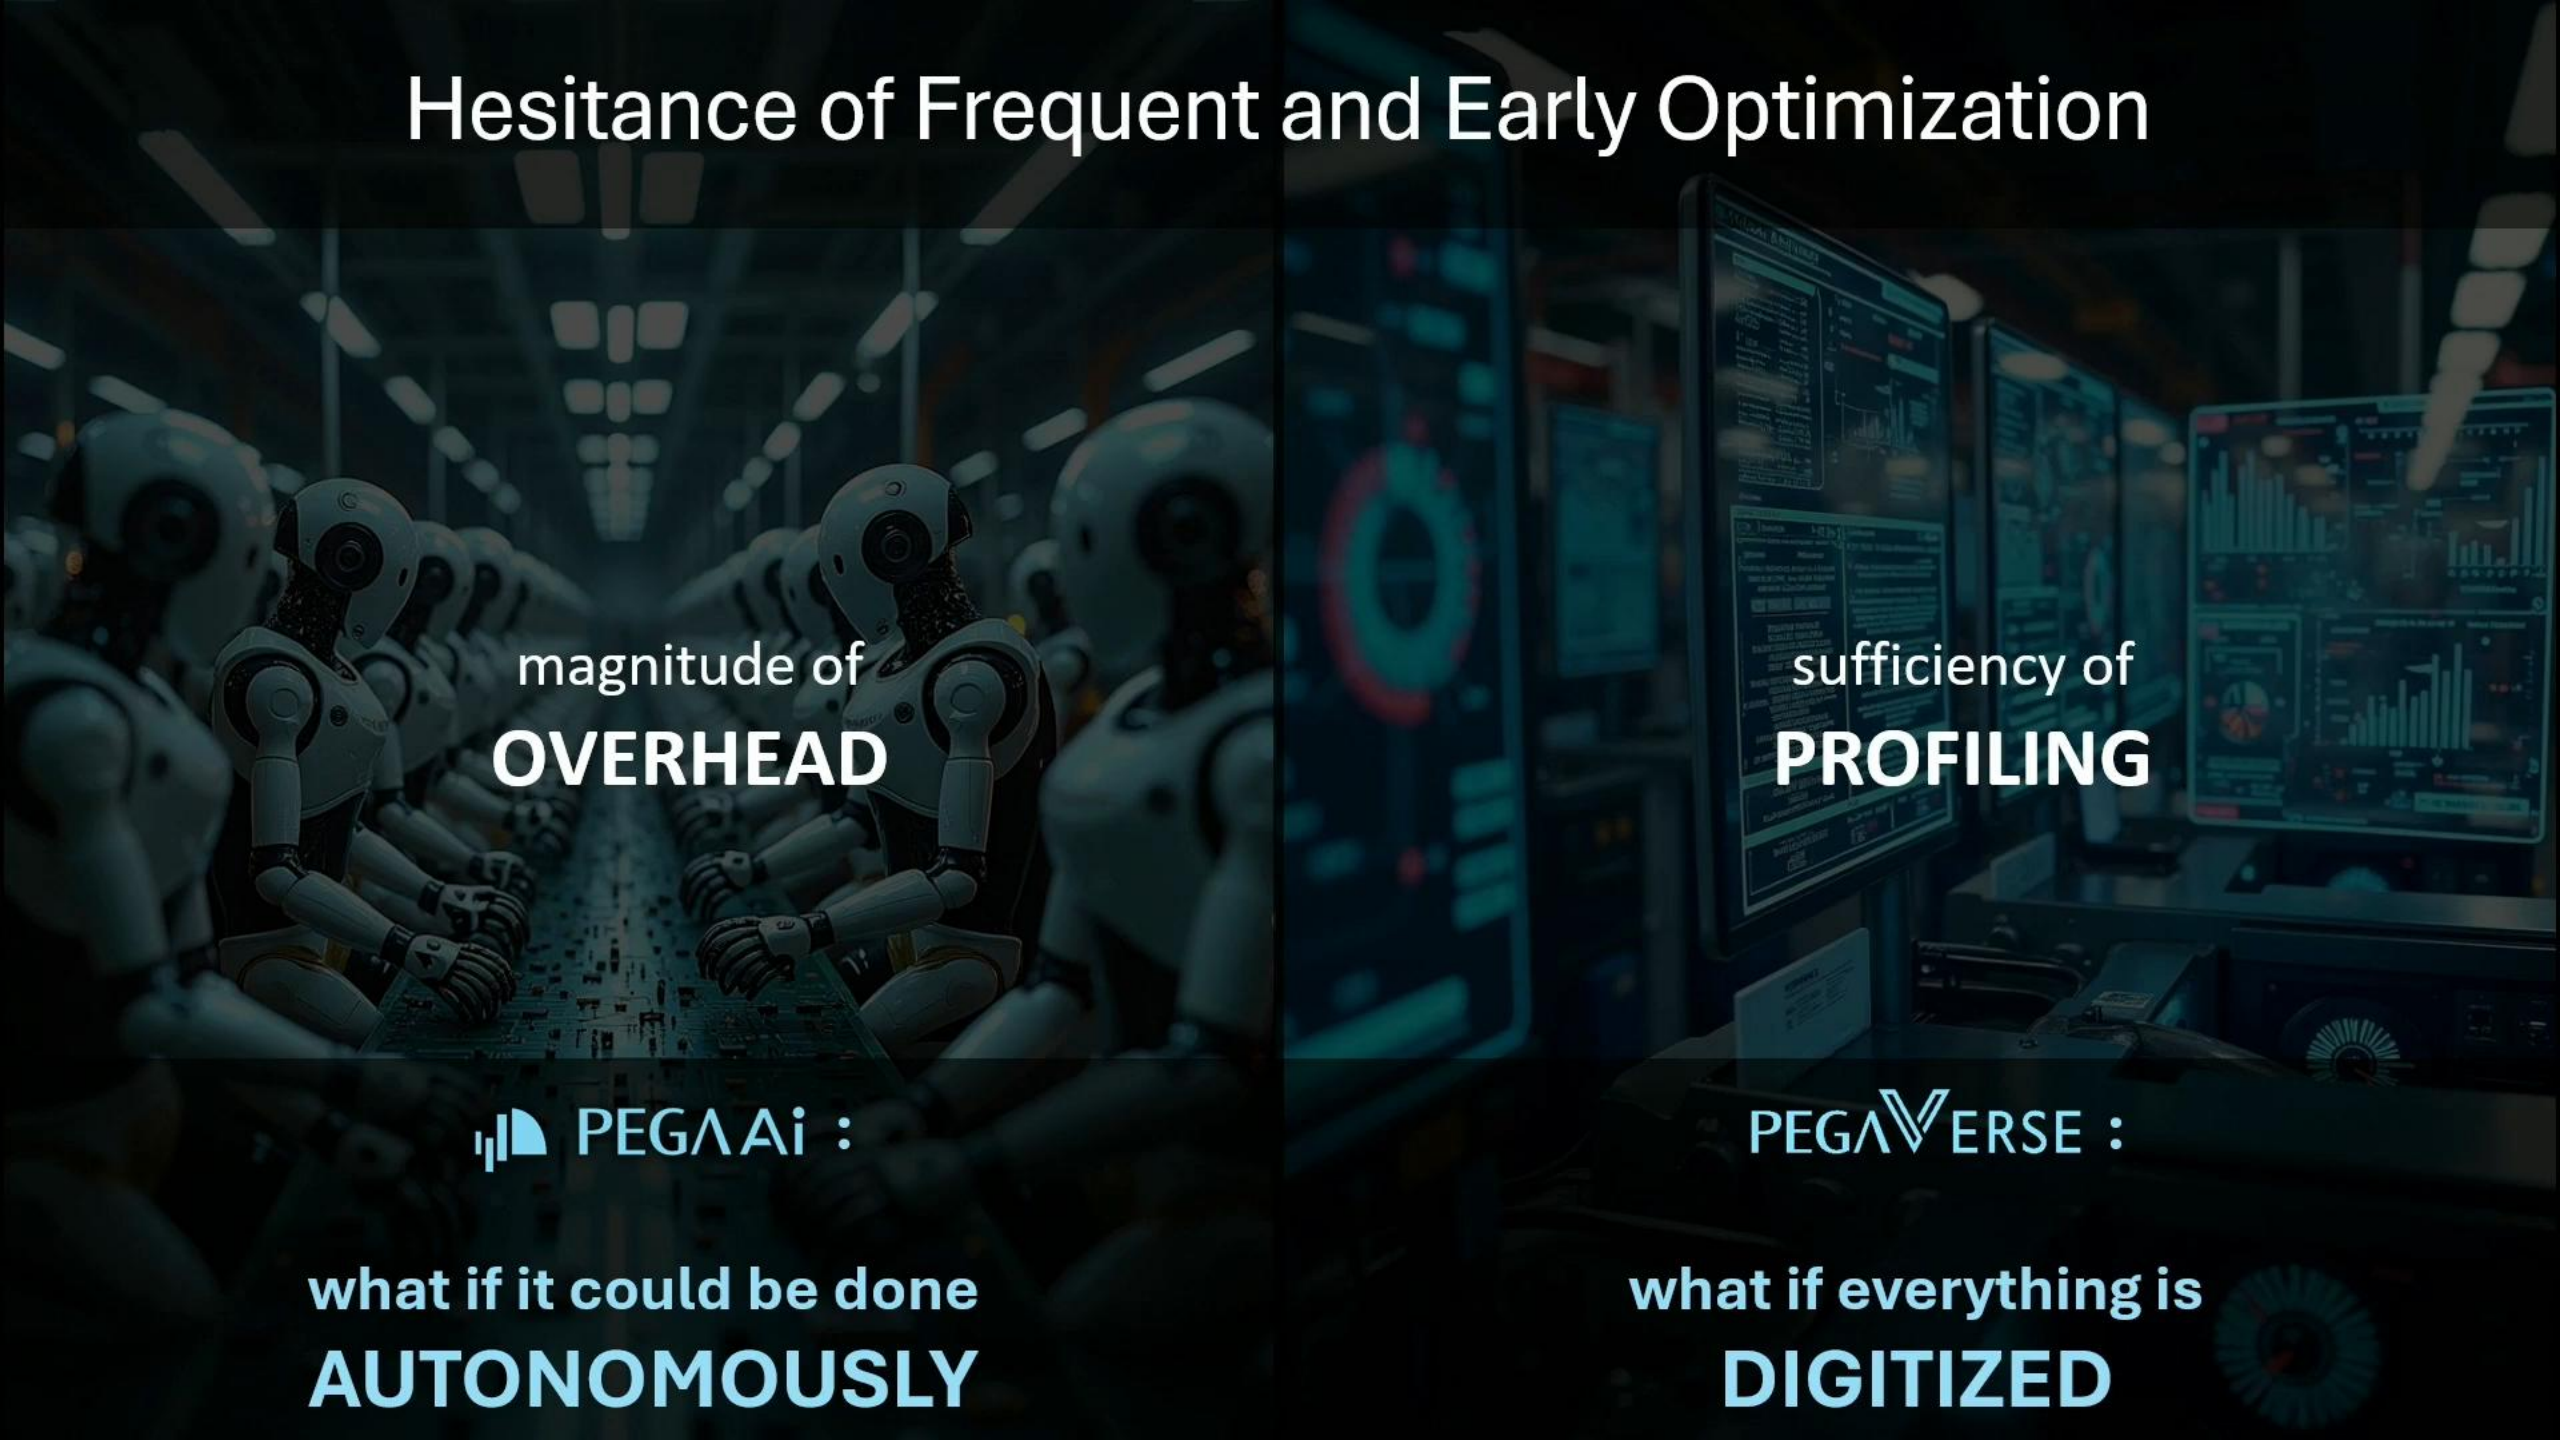

AI FACTORY: PEGAAi NVIDIA AI Enterprise

DIGITAL TWINS: PEGAVERSE NVIDIA Omniverse Enterprise

Hesitance of Frequent and Early Optimization

Data warehouse/big data

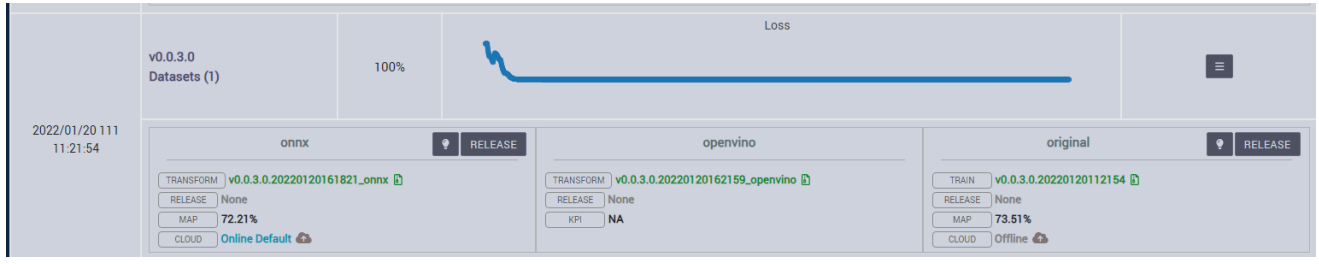

MLOps

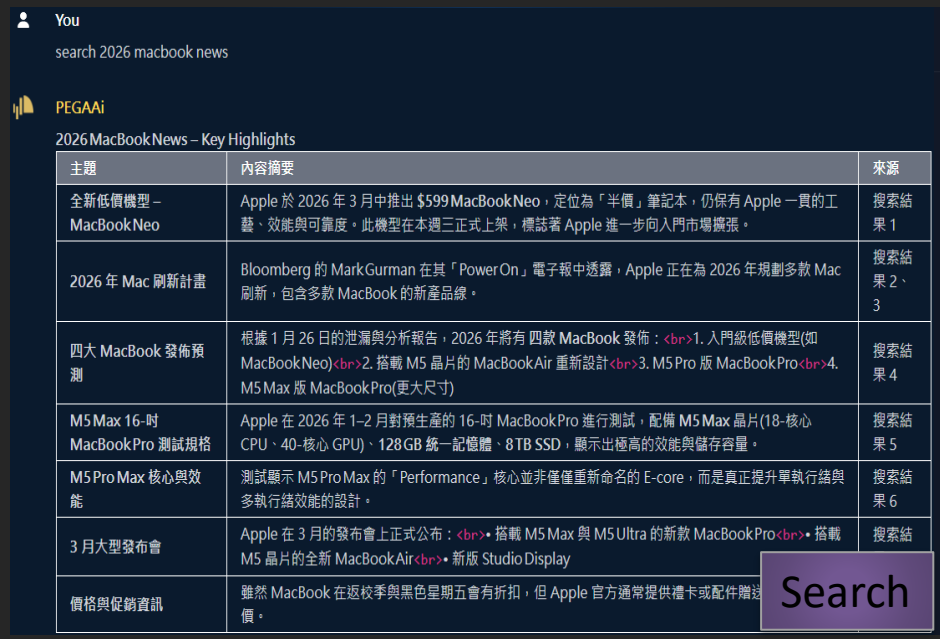

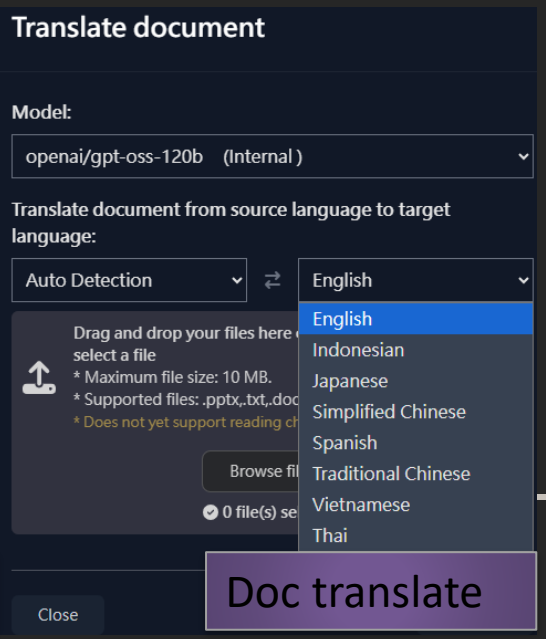

PEGAAI - AI Assistant

- **Agent Hub**

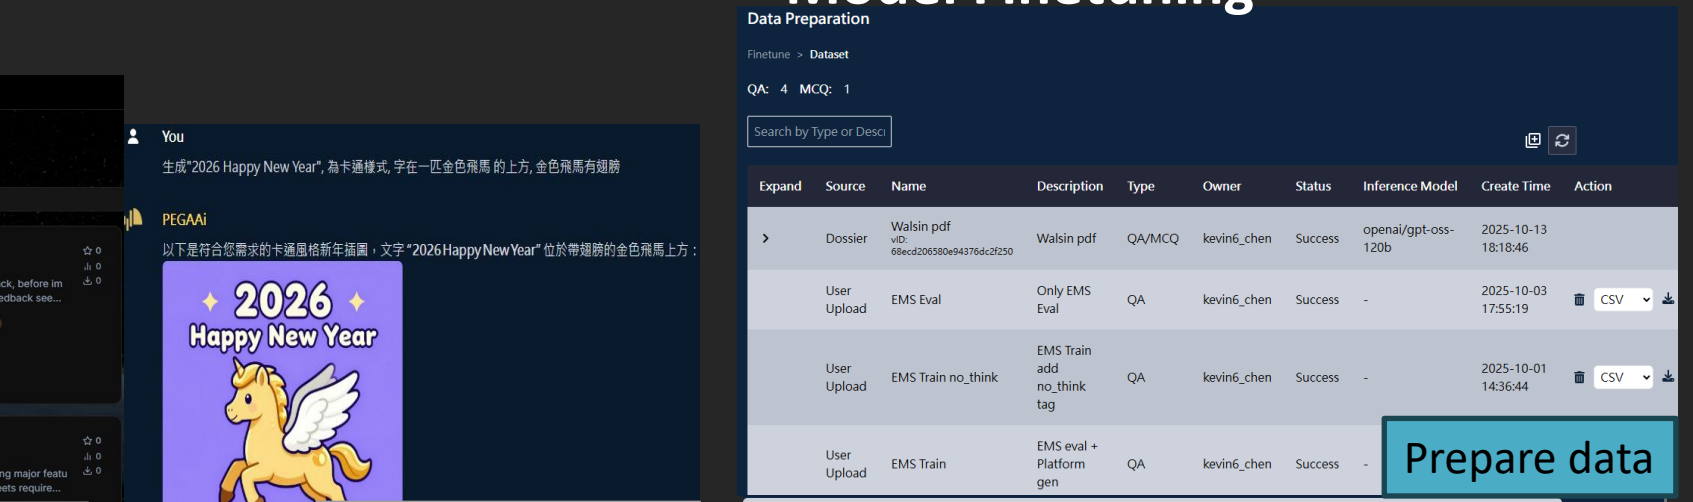

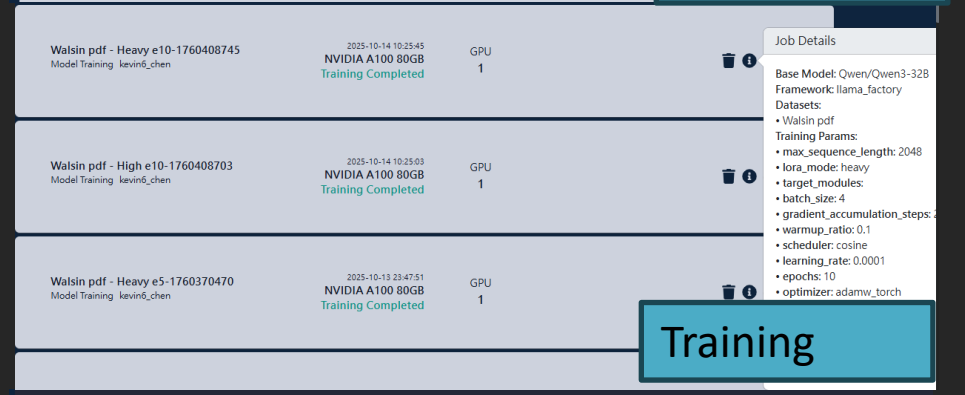

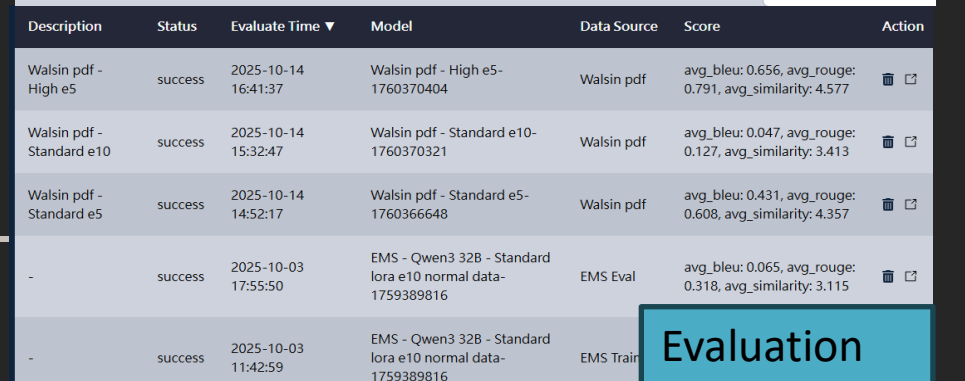

- **Model Finetuning**

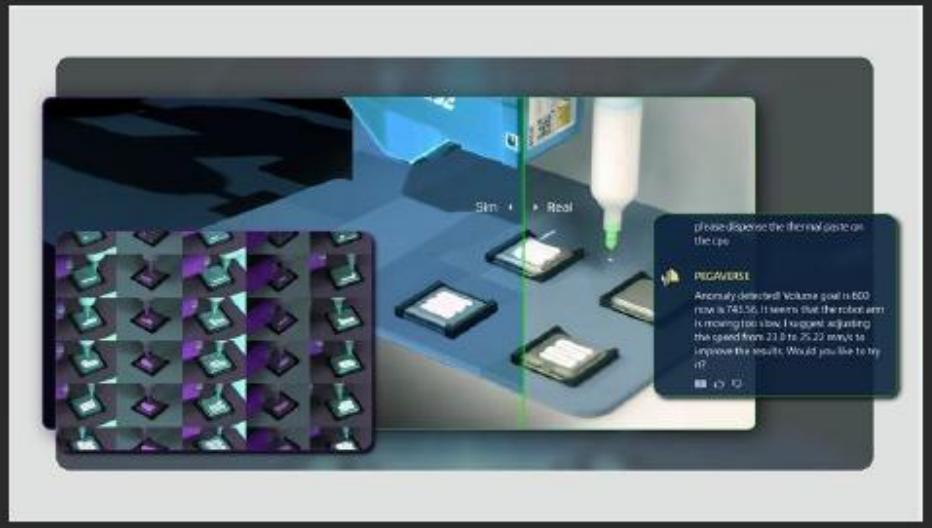

PEGAVerse

PEGAVERSE

Developed by Pegatron to enhance automation, operation, and innovation in manufacturing and inspection workflows through digital twins and AI agent

Simulation Task - JEDI

- A cutting-edge simulation-first AI agent system
- Self-optimizing robotic system built on the cloud-based PEGAVERSE platform
- Integrating with NVIDIA Omniverse™ guarantees consistency and reliability

VSOP Task - YODA

- Provides efficient and intuitive assembly guidance
- 3D immersive instructions
- Enhance assembling efficiency through providing constructive feedback and supervision

PEGAAI
Speed up the Evolution
Job Detail

AI SW Engineer

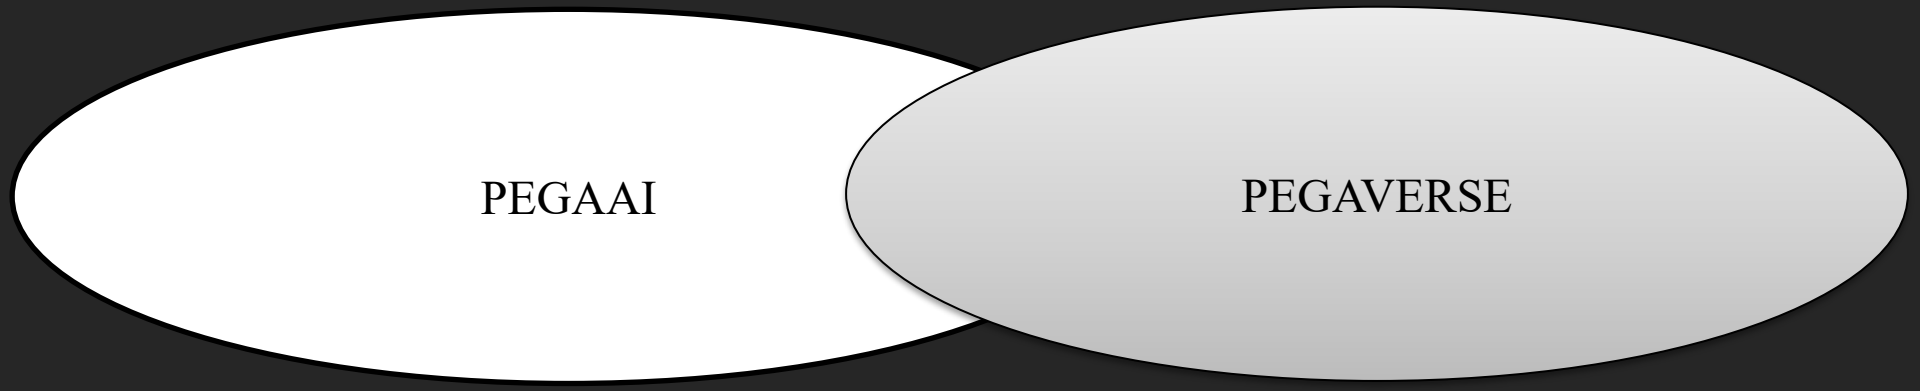

- Jobs
  - System architecture design
  - Service/Application creation/deployment
  - LLM application
  - Function maintenance
  - Agent create
  - Workflow create
  - Demo project

- Skills
  - Linux
  - Vibe Coding Development
    - Opencode(free internal model), claude code, antigravity
  - Coding
    - Python
  - Virtualization
    - Docker
  - Deployment
    - K8s, helm
  - CI/CD
    - Gitlab, shell
  - Cache(Redis)
  - DB
    - SQL
    - MongoDB
  - Extra
    - Prometheus, Grafana
    - LLM

Job Group

- **You can select one main group to join, however these two group are highly co-working team.**

PEGAAI - Agent platform
- Common AI platform to provide DL/LLM features.
- Provide ability to integrate feature with applications.
- Provide solutions for AI related.

PEGAVERSE - Cyberspace platform
- Interface for people to start working with cyberspace.
- Solutions for cyberspace, digital twin, AIOT.

Roadmaps – Agent platform

- Target: Become an AI solution provider and developer

LLM	Backend	Vibe Coding
• Agents • RAG/GRAG • Memory • Skills • MCP • LLM deployment • Observation	• K8s, Helm deployment • API • CICD • Unittest • DB • Observation	• SDD • TDD • Checkpoint

PEGAVerse Roadmaps

- Target: Become a virtual solution provider

LLM	Backend	Vibe Coding	Nvidia Issacsim
• Agents • Skills • MCP	• K8s, Helm deployment • API • CICD • Unittest • DB • Observation	• SDD • TDD • Checkpoint	• Scene buildup • 3D object creation

Speed up the Evolution
Assignment

內容

題目：圖片翻譯(Image translation)....2

題目：讓 AI 跟文件對話....3

Assignment 說明

請從提供的題目選一個以 ai native(ClaudeCode, AntiGravity, Codex, ...etc)的方式實作

時間：a week(D+7) when you got this assignment

Delivery:

1. Code, zip code and mail to my email or provide link to access the code.
2. PPT
   - Describe project architecture and result.
   - How did you cowork with AI to finish this assignment?
   - What's your learn/insight when cowork with AI?
3. Demo: local run, you don't need to deploy it.

題目：圖片翻譯(Image translation)

限制：無

需求：

- 一個 fastapi service
- API
  - Output – translated image
  - Input
    - *image [must]
    - *target language [must]
    - source language(empty for auto detect) [optional]
  - test image translate from any to zh
- respond time: no limit
- model: none or any
- Image:
  - Magazine cover
  - Paper / Journal Article with formula

EX: (French -> zh, you could demo with any cover image, paper)

題目：讓 AI 跟文件對話

限制：

1. 不能使用現成的 gpt/gemini api 解析文件, LLM 只做 text to text
2. 假定 LLM max context size 為 10K

預設的使用者問問題文件：

https://arxiv.org/pdf/2410.05779

使用者需求：

- 一個 website 有聊天介面，使用者可以上傳文件後問問題，LLM 會根據你提供的資料回答問題
- 問題 1: summary this document.
- 問題 2: compare lightRAG with GraphRAG
- 問題 3: Performance of ablated versions of LightRAG

請以 AI Native(claude code, anti gravity, codex...etc)的方法實作出它

完成後請把專案打包寄給我們，會再約時間做線上 demo

- 說明你怎麼處理文件 token 超過 LLM max context size?
- 說明你怎麼處理 summary?
